

Practical 1

Aim: - Making a Raspberry Pi headless, and reaching it from the network using WiFi and SSH.

Prerequisite:

- Raspberry pi imager download [here](#)

Step 1: Install Raspberry pi imager

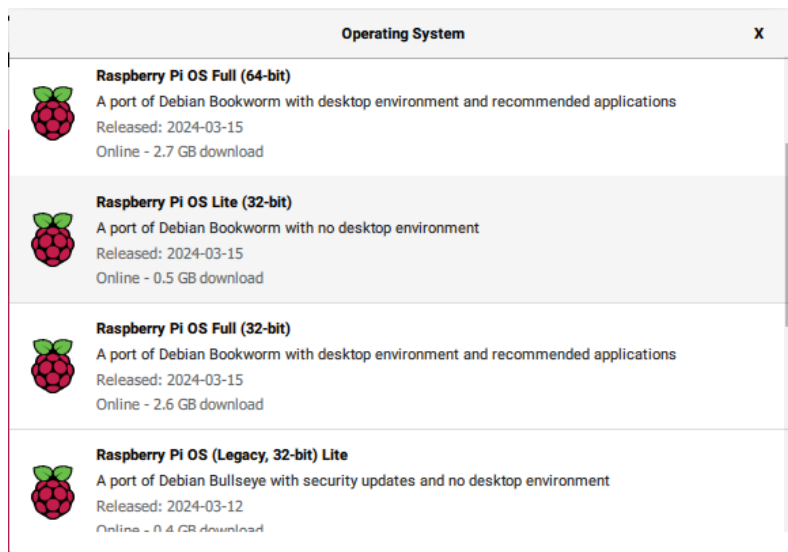

Step 2: Create a bootable SD card

Open Raspberry Pi Imager

Under **Others** choose **Raspberry Pi OS Lite (32 bit)**

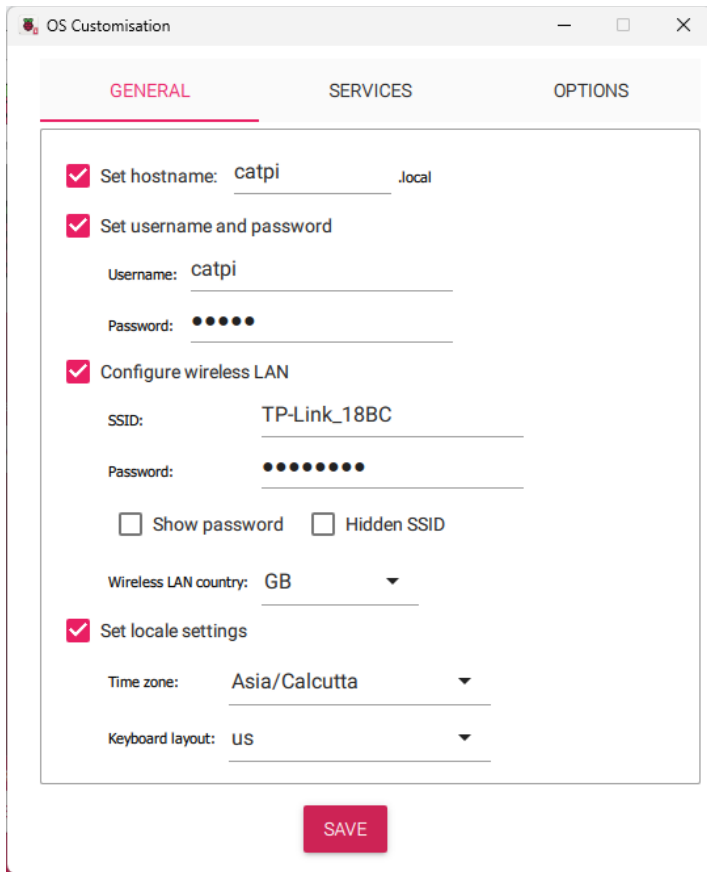

Choose the appropriate **device** and the **storage**

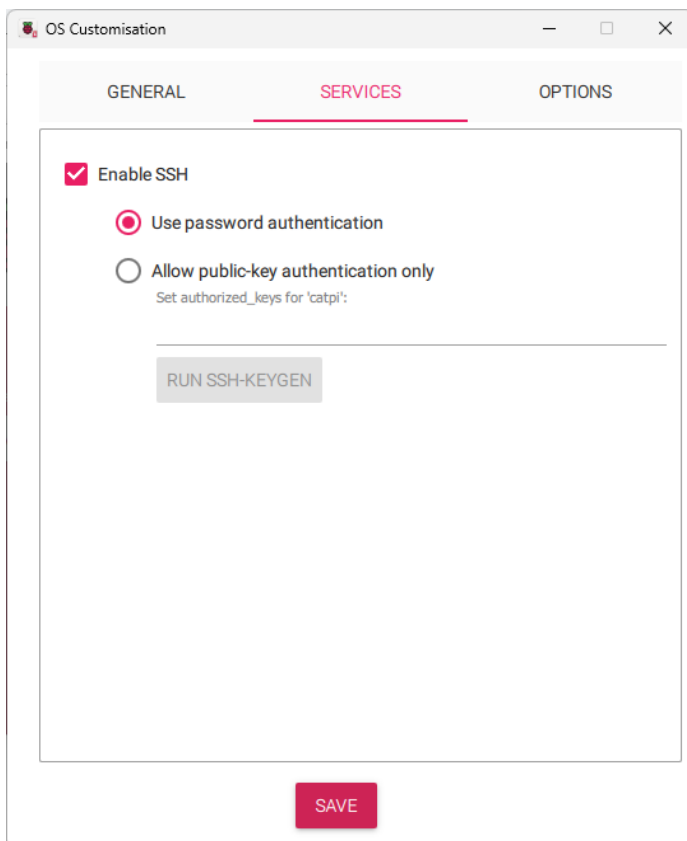

After Clicking **Next** Click on **Edit Settings**

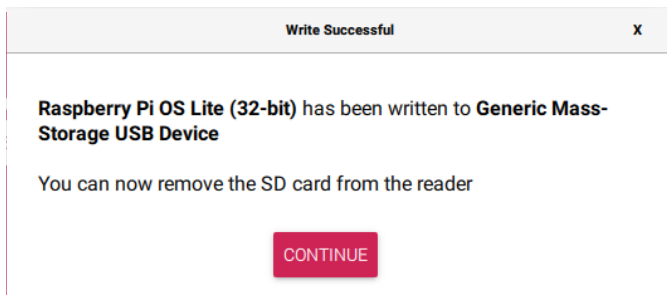

Enter basic Information for wifi and login credentials

Enable SSH Service

Click Yes and wait for it to finish

Step 3: Connect Raspberry Pi using ssh (Note: I am using powershell 7 that has builtin ssh)

```
ssh <username>@<ip_of_rasp>
```

```
PS D:\> ssh catpi@10.128.0.130
catpi@10.128.0.130's password:
Linux catpi 6.6.28+rpt-rpi-v7 #1 SMP Raspbian 1:6.6.28-1+rpt1 (2024-04-22) armv7l

The programs included with the Debian GNU/Linux system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.

Debian GNU/Linux comes with ABSOLUTELY NO WARRANTY, to the extent
permitted by applicable law.
Last login: Tue May  7 16:29:57 2024 from 10.128.0.119
catpi@catpi:~ $
```

Step 4: Change hostname of the system

```

Raspberry Pi Software Configuration Tool (raspi-config)
1 System Options      Configure system settings
2 Display Options    Configure display settings
3 Interface Options  Configure connections to peripherals
4 Performance Options Configure performance settings
5 Localisation Options Configure language and regional settings
6 Advanced Options   Configure advanced settings
8 Update             Update this tool to the latest version
9 About raspi-config Information about this configuration tool

<Select>                                <Finish>

```

```

Raspberry Pi Software Configuration Tool (raspi-config)
S1 Wireless LAN      Enter SSID and passphrase
S2 Audio             Select audio out through HDMI or 3.5mm jack
S3 Password          Change password for the 'catpi' user
S4 Hostname          Set name for this computer on a network
S5 Boot / Auto Login Select boot into desktop or to command line
S6 Splash Screen     Choose graphical splash screen or text boot
S7 Power LED         Set behaviour of power LED
S8 Browser           Choose default web browser

<Select>                                <Back>

```

```

Please enter a hostname
catpi
<Ok>                                <Cancel>

```

Step 5: Update the system

```
sudo apt update && sudo apt upgrade
```

```

catpi@catpi:~$ sudo apt update && sudo apt upgrade -y
